

Intro

MoceanSMS 2FA Login Typo3 Extension allows frontend users to opt in to SMS 2FA verification for login by using MoceanAPI. This extension requires static templates(Bootstrap Package: Full Package and Typoscript Form) to function.

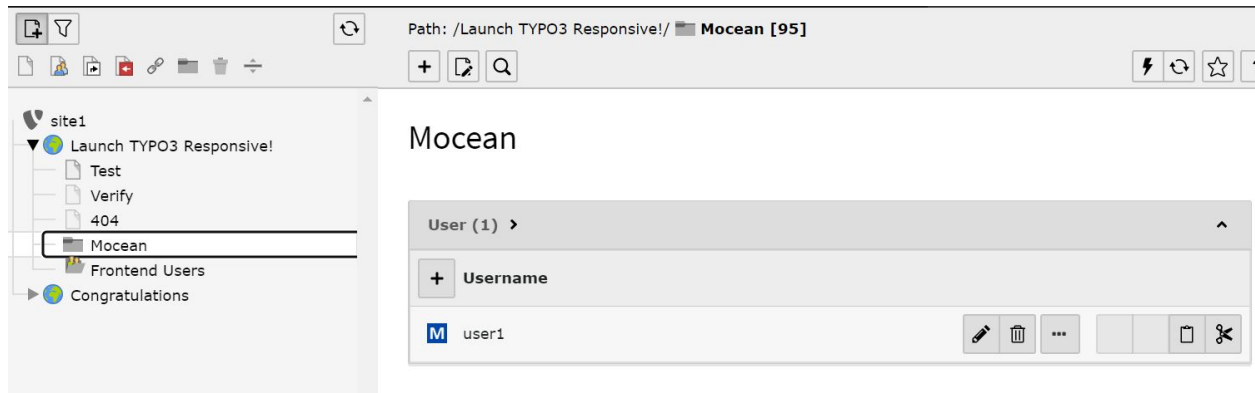

Configuration

Administration is required to configure the extension to ensure full use of the extension.

Extension Configuration	
Storage Page ID mocean.moceanStoragePid (int+)	<input type="text" value="95"/>
Storage page ID of where the records are kept.	
<hr/>	
Verify Page mocean.moceanVerifyPage (string)	<input type="text" value="http://localhost/typo3/verify"/>
URL of page with verify form.	
<hr/>	
Logout Page mocean.moceanLogoutPage (string)	<input type="text" value="http://localhost/typo3/404"/>
URL of page to redirect after forceful logout.	
<hr/>	
Unavailable Page mocean.moceanUnavailablePage (string)	<input type="text" value="http://localhost/typo3/404"/>

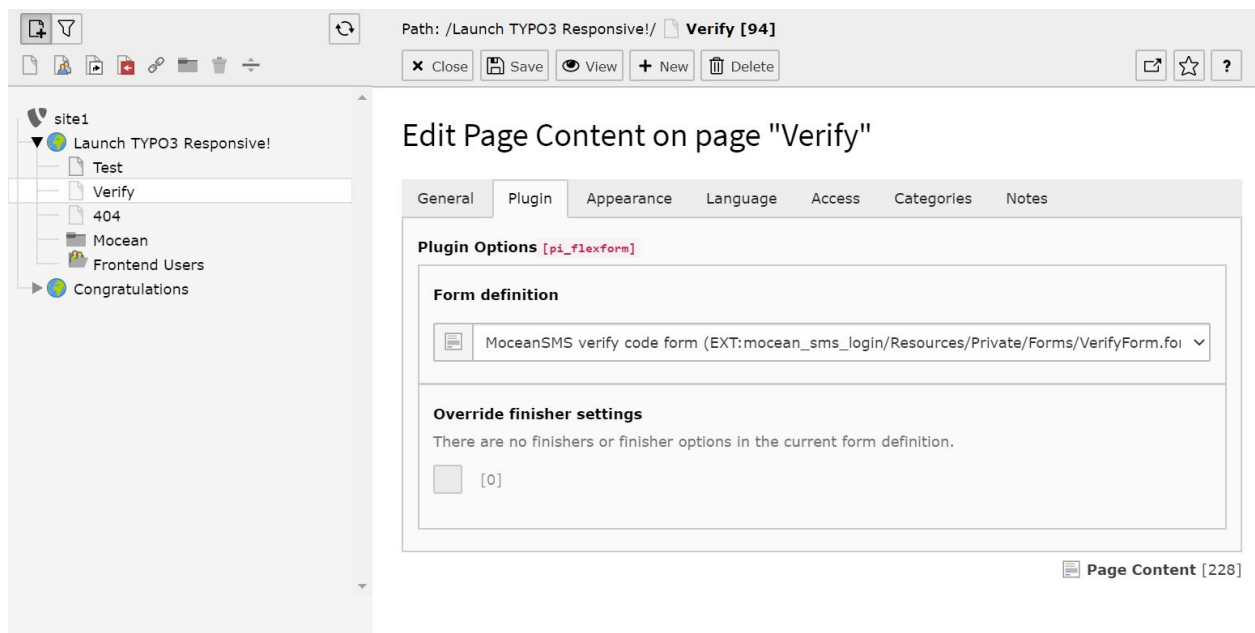

Storage Page ID

Create or select a folder to store opted-in users, the Storage Page ID should be visible at the top bar(ex: Mocean[95]). Create the folder beforehand so that all opted-in users may be listed.

Verify Page

Opted-in users will be redirected to a page for verification, create a new page and insert MoceanSMS verify code form, configure the page so that the page cannot be seen in menus as needed, URL can be configured in extension configuration.

Logout Page

Opted-in users who tried to navigate to other pages without finishing verification will be forcefully logged out and redirected to this page, URL can be configured in extension configuration.

Unavailable Page

If errors(low on credit, authorization failed for Mocean account etc.) appear when sending the verification SMS to opted-in users during login, they will be logged out and redirected to this page, can be configured in extension configuration.

Opt-in Form

Users may opt in and opt out through MoceanSMS opt in form.
